PROFESSIONAL SUMMARY

Second-semester BS Artificial Intelligence student passionate about building practical software beyond university coursework. Hands-on experience developing projects in Python and C++, including AI assistants, automation tools, desktop applications, backend systems, and interactive web applications. Enjoy solving real-world problems through software engineering and continuously expanding technical knowledge through project-based learning. Seeking a software engineering internship to contribute to meaningful projects while learning from experienced engineers.

TECHNICAL SKILLS

Languages	Python · C++ · JavaScript · HTML · CSS
Libraries	NumPy · Pandas · SFML · Node.js · Express.js · Three.js · GSAP
Web Technologies	HTML · CSS
Databases	MongoDB · SQLite
Development Tools	Ollama (local LLM inference) · Visual Studio Code
Core Concepts	Object-Oriented Programming · AI Fundamentals · Automation · Desktop Applications Development · Web Development · Backend Development
Profiles	GitHub: Profile Under Development · Portfolio Website: Coming Soon

FEATURED PROJECTS

Jarvis — Local AI Operating System

Active Development

Voice-controlled assistant with deterministic routing, automation workflows, and intelligent file search

- Designed a multi-layer architecture routing instant commands to deterministic handlers while delegating complex reasoning to a local LLM — ensuring low-latency responses across both paths.
- Integrated Ollama for fully offline AI inference, keeping all data on-device with no external API dependency.
- Implemented voice recognition and text-to-speech synthesis for a natural, hands-free interaction model.
- Built a file indexing and semantic search system enabling context-aware retrieval across the local filesystem.
- Automated desktop tasks and browser interactions, extending the assistant into operating-system-level workflows.

Stack Python · Ollama · Speech Recognition · TTS · SQLite · Whisper · PyQt6 · Playwright

NOVA — Smart University Assistant

Fully Functional

Terminal-based productivity and AI assistant designed for university students

- Implemented rule-based intelligence for deterministic tasks combined with optional local LLM support for open-ended queries.
- Developed a GPA calculator, Pomodoro timer, mood tracker, and task manager within a unified modular Python architecture.

- Integrated web search directly into the terminal, reducing context-switching during study sessions.
- Engineered automated test coverage to validate core modules and maintain reliability across updates.

Stack Python · Ollama · DuckDuckGo Integration · Unit Testing

DeathLeade Network — Minecraft Server Store

Completed

Full-stack e-commerce platform with automated digital delivery for a live game server

- Engineered automated rank delivery via RCON protocol integration, eliminating manual fulfilment from the order pipeline.
- Built a backend order management system with secure authentication and structured payment workflow.
- Integrated MongoDB for persistent storage; developed a responsive frontend with Three.js animations.

Stack Node.js · Express.js · MongoDB · Three.js · GSAP · RCON

Solar System Explorer

Completed

Interactive educational web application with immersive 3D planetary visualisation for exploring planets and space science.

- Developed an immersive WebGL experience using Three.js with animated planetary models and smooth scrolling effects.
- Built responsive educational pages featuring planet comparisons, mission timelines, and interactive visual content.
- Focused on delivering an engaging learning experience through modern frontend technologies.

Stack Three.js · JavaScript · HTML · CSS · WebGL

Tetris — Desktop Game (C++ / SFML)

Completed

Desktop implementation of the classic Tetris game

- Implemented a frame-independent game loop, collision detection, and keyboard input handling using SFML.
- Applied OOP principles to model game state, piece behaviour, and the rendering pipeline.

Stack C++ · SFML · OOP

Smart Parking Management System

Completed

Object-oriented console application for intelligent parking management

- Designed a class hierarchy applying encapsulation, inheritance, and polymorphism across vehicle and slot modules.
- Implemented file-based persistence, dynamic fee calculation, and automated report generation.

Stack C++ · OOP · File Handling

EDUCATION

Bachelor of Science in Artificial Intelligence (BS AI)

Expected 2030

Second Semester (Air University · Islamabad, Pakistan) · CGPA: 2.94 / 4.00 (in progress)

Intermediate Education (Pre Eng)

(Punjab College · Sargodha, Pakistan) · Percent: 85%

Relevant Coursework

Programming Fundamentals · Object-Oriented Programming · Digital Logic Design · Computer Networks · Discrete Structures

LANGUAGES & INTERESTS

Languages English (Working Proficiency) · Urdu (Native)

Interests Artificial Intelligence · Software Engineering · Automation · Game Development · Web Technologies · Continuous Learning
